

Project Title

Dealership Creative Automation Tool

Objective

Build a web-based tool to automate generation of dealership creatives by combining:

- Brand (Account)
- Dealership panel
- Logo (optional)
- Background image

The system should support bulk creative generation with minimal manual effort.

Functional Requirements

1. Account & Dealership Mapping

- Provide a dropdown:
Account Selection (Brand)
Examples:
 - Tata
 - Volkswagen
- Based on selected account:
 - Dynamically load corresponding dealerships

Example:

- If Kia selected → show only Kia dealers
- If VW selected → show only VW dealers

2. Dealership Selection (Bulk Support)

- Show list of dealerships:
 - VW-Apple
 - VW-KUN
 - VW-Lally
 - etc.
- Allow:
 - Single select
 - Multi-select (important for bulk generation)

3. Asset Selection (Optional)

- Option to enable/disable:
 - Logo
 - Additional branding assets
- If enabled:
 - Select from predefined assets OR upload

4. Background Image Upload

- Upload one images
- Supported formats:
 - JPG / PNG
- Requirements:
 - Maintain original quality
 - No distortion

5. Creative Generation Logic

For each selected dealership:

- Combine:

- Background image
 - Dealership panel (provided)
 - Logo (if selected)
- Maintain:
 - Proper alignment
 - No cropping issues
 - Consistent spacing

6. Bulk Processing

- If:
 - Generate 5 creatives
 - Generate 15 creatives

7. Output Download

- Download options:
 - Individual images
 - OR ZIP file (preferred)
- Output formats:
 - Instagram post (1080×1080)
 - Instagram post (1080x1350)
 - Instagram story (1080x1920)

AI / Automation Requirement (Important)

Candidate must implement at least one intelligent automation, such as:

- Auto-adjust panel position based on image size
- Smart scaling (no white space / no crop)
- Auto-alignment of logo
- Batch optimization (fast processing)

- At least use one AI to adjust the text so it doesn't overlap with the dealership panel below.

Assets (We Will Provide)

We will attach:

- Dealership panels (PNG)
- Logos
- Sample input images
- Expected output examples

Submission Guidelines

- Submit code as a GitHub repo or ZIP file
- Include a SQL dump file (database.sql) for DB setup
- Include a README file with:
 - Setup instructions
 - Default admin login credentials

Note: Use of AI-generated code or assistance (e.g., ChatGPT, Copilot, or similar tools) is strictly prohibited. Candidates must complete the test independently. We have tools in place to analyze and detect AI-generated content. Any submission found to be assisted by AI will be disqualified.
